# INSTALLATION GUIDE

## ACRYLIC FRAMES MOUNTED TO 10MM ROD SYSTEMS
### Wall-to-wall WM11 & RG01 Rod Support Fixing

**IMPORTANT:** It is essential to choose the right type of screw for fixing these supports to your wall (see diagrams below).

1) Select the upper height to which rod is to begin. Affix brass fitting **(A)** to wall using a suitable fixing for the wall type:
– for wood stud walls use a wood screw.
– for cavity/plaster wall use a spring toggle bolt or **twist-n-lock anchors**.
– for solid/concrete wall use a raw-plug and screw.

2) Using a plumb line; descend from **(A)** to the required position for the bottom fitting **(A1)** and affix.
3) Screw rod supports **(B-B1)** into the brass fittings **(A-A1)**.

4) Loosen the set screws on the wall fittings **(B-B1)**, and slide the rod **(C)** into the open cavities at required position. Then tighten back the set screws with Allen Key provided.

5) Attach the decorative end cap **(D-D1)** to both ends of rod.

6) Attach your acrylic accessories to the rod using the panel support **(E-E1)**.

**NOTE:** For lightweight display components such as small and medium size acrylic frames and holders Nova Display Systems provides **twist-n-lock anchors**. It is at your discretion to use the anchors provided or use similar product rated for 50 to 75 lb weight limit.
